Computer Vision Research Student (PhD)

Job description:

The Computer Vision Research Student will be part of the Software Advanced Technology group, in the Deep Learning group.

Responsibilities:

- Research and develop state of the art techniques in the field of computer vision and Deep Learning
- Design and implementation of DNN algorithms
- Definition and development of DNN software solution

Requirements:

- Ph.D. student in Computer Science / Electrical Engineering / Physics or related
- Strong understanding of computer science fundamentals, including algorithms, complexity analysis, data structures, problem-solving and design
- Experience with deep learning frameworks Tensorflow, Caffe, and PyTorch
- Experience with Python
